Title
Making Clinical Sense of 3D Metrology Software

Abstract
Advances in digital dentistry have opened up a new world of instrumentation and analysis. The ability to see and understand 3D differences in the micron range is complicated by the desire to run one-dimensional statistical tests. This presentation will explore options for the practitioner to make clinical sense of this emerging technology.

Learning Objectives
1. The participants will an understanding the abilities of 3D metrology software.
2. The participants will an understanding the limitations of making clinical decisions with current statistical modalities.
3. The participant will have an understanding of how they may use the current parameters to decipher clinical implication.

Biography
Dr. Goldstein is Professor Emeritus at NYU College of Dentistry which has established the Dr. Gary Goldstein Award for Excellence. Due to his passion for boating, scuba diving and fishing his current research is focusing on the Biosecurity of Fresh and Salt Environmental Water Resources.
